

EMERGING TREATMENT FOR NECROTIZING FASCIITIS

The National Necrotizing Fasciitis Foundation has endorsed NeutroPhase, in combination with negative pressure wound therapy, as the standard approach in treating the life-threatening 'flesh-eating' disease. After dozens of NF cases, this ground breaking approach has resulted in ZERO loss of lives or limbs.

COMMENTS FROM PATIENTS AND PROFESSIONALS

“A small wound she (my mom) has had for months is healed up in weeks with using the NeutroPhase numerous times a day. I am a MIRACLE worker in her eyes.”

– DG, Home Health Wound Nurse

“Once NeutroPhase was started, I could feel that I'd turned the corner for the better.”

– Jared Hamilton-Necrotizing Fasciitis Survivor

“In my 43 years as a surgeon, treating well over 150 NF patients, I cannot emphasize the significance of this extraordinary discovery.”

– Dr. Anibal Gauto MD

“Our center incorporated NeutroPhase Wound Cleanser into our protocol. Formulary additions such as this are done only after rigorous testing of any new product. During a six month trial period, our nursing staff saw such significant results, they insisted we start using NeutroPhase routinely as part of our protocol.”

– Kerry T. Thibodeaux, MD FACS, Medical Director, The Wound Treatment Center at Opelousas General Health System

“I would use NeutroPhase on any wound, and I believe we have an indispensable tool in our armamentarium for wound care.”

– Dr. John Crew, Vascular Surgeon

SAMPLES

Satisfaction Guaranteed

Complimentary samples are available for medical professionals to evaluate NeutroPhase. During the evaluation, we will partner with you by providing samples and supporting materials of NeutroPhase for one or more patients until the conclusion of the evaluation (trial). Simply call, email or visit our website today.

CONVENIENT PACKAGING OPTIONS

Item #	Description	Qty.	HCPC
1412	8oz NeutroPhase (0.03 HOCl)	4-pack	#A6260
1413	80mL NeutroPhase (0.03 HOCl)	6-pack	#A6260

DISTRIBUTION

NeutroPhase is manufactured by NovaBay Pharmaceuticals, Inc. and distributed exclusively by Principle Business Enterprises, Inc. (PBE) within the United States. PBE is a woman-owned enterprise celebrating over 50 years of business.

WHAT IS NEUTROPHASE?

NeutroPhase Skin and Wound Cleanser is a proprietary, FDA cleared 510(k) skin and wound cleanser consisting of pure hypochlorous acid (HOCl) as a preservative in saline. In-vitro studies show NeutroPhase in solution disrupts bacterial biofilms and eliminates 99.99% of pathogens.

Before NeutroPhase, short shelf-life and impure formulations prevented HOCl from being widely used. NeutroPhase is the only product available that contains pure 36 month shelf-stable HOCl solution. A total game-changer in wound care, its ground-breaking formula is a result of a highly controlled compounding process. NeutroPhase **IS NOT** electrolyzed water nor does it contain cytotoxic sodium hypochlorite (bleach) like Dakin's.

NeutroPhase Disrupts Biofilm and Kills Bacteria

Saline (control) after 10 minutes

NeutroPhase[®] treated after 10 minutes

THE PROBLEM: Currently, clinicians are faced with a choice of clearing microorganisms from the wound **OR** protecting the newly granulating tissue. **THE SOLUTION: NEUTROPHASE**
In laboratory studies, HOCl is 80-100 times more effective than the current bleach and water solution (Dakin's). In-vitro studies confirm the rapid activity of NeutroPhase and that the solution **does not generate bacterial resistance**. Significantly, there have been **NO** known side effects or sensitivities reported with clinical use.

WHY NEUTROPHASE?

HOCl, A NATURAL COMPONENT:

- HOCl is a potent microbial agent produced by the human immune system
- Powerful oxidizer

IN-VITRO TESTING SHOWS:

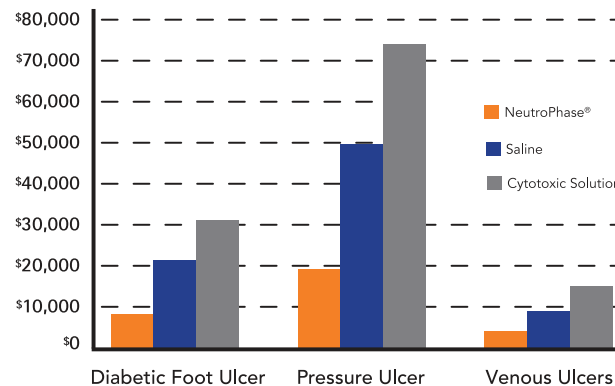

- Complete neutralization of bacterial toxins
- Penetration & disruption of biofilms
- **DOES NOT PROMOTE** bacterial resistance
- AND**
- Healthy human cells remain unharmed

USES IN WOUND CARE:

- Cleaning and irrigation
- Wound bed preparation
- Moistening absorbent wound dressings
- Clearing microorganisms from the wound

Based on third party market-cost analysis, **NEUTROPHASE SIGNIFICANTLY REDUCES TREATMENT COSTS** per day resulting in **DRAMATIC OVERALL COST SAVINGS** to the facility or payor.

HOW TO USE NEUTROPHASE

EASY TO USE GUIDELINES:

- STEP 1 INSERT SPRAY APPLICATOR**
 - Shelf life is 60 days for 0.03 HOCl with applicator inserted.
- STEP 2 REMOVE CURRENT DRESSING, EXPOSING ENTIRE WOUND BED**
 - Use NeutroPhase to loosen the dressing if adhering to the wound.
- STEP 3 MOISTEN ENTIRE WOUND BY SPRAYING NEUTROPHASE THROUGHOUT THE WOUND BED**
 - Hold approx. 5" from wound.
 - Be sure to include the wound base, all sides and tunneling of the wound.
 - There is no need to rinse out.
 - Use before, during and after debridement.
- STEP 4 SPRAY (MOISTEN) NEUTROPHASE AGAIN PRIOR TO APPLYING NEW DRESSING**
- STEP 5 APPLY NEW DRESSING**

REPEAT WITH EACH DRESSING CHANGE!

NeutroPhase can be used in combination with Negative Pressure Wound Therapy via installation vacs or instilled directly into wound (Refer to the instructional video on www.neutrophaseus.com and click on the Applications Tab.)

NEUTROPHASE IS THE NEW STANDARD IN WOUND CARE.
